### **Introduction and Summary**

Out of an abundance of caution and to avoid the risk of violating this Court's order mandating Defendants' response, Defendants respectfully move to dismiss Plaintiff Raul Garza Marroquin's petition here even though it should be litigated in the Brownsville Division. (*See* Dkt. 13.) Defendants ask, however, that the Court grant their motion to sever and transfer Garza's claims to the Brownsville Division and deny this motion as moot. **This motion largely duplicates arguments made in the motion to dismiss that is properly before this Court.**

Plaintiff essentially alleges that immigration detention is now unconstitutional and asks the Court to order his immediate release. Plaintiff brings a habeas corpus claim alleging that his continued detention at the Port Isabel Detention Center violates the Fifth Amendment to the Constitution. Even assuming Plaintiff's allegations are true, they do not state a claim. The Fifth Circuit does not recognize a conditions-of-confinement habeas corpus claim. And a cause of action against the federal government directly under the Constitution is similarly not cognizable. Even if these claims could be brought in the Fifth Circuit, Plaintiff has pled merely the potential introduction of a disease coupled with typical conditions of a densely populated detention facility—allegations the Fifth Circuit has made clear do not amount to a constitutional violation. Moreover, the evidence submitted here shows that these allegations are without merit.

Plaintiff also does not state a claim under the Rehabilitation Act where courts across the country have held that federal detainees may not bring Rehabilitation Act claims and where Plaintiff does not articulate what programs or services he allegedly has been excluded from.

This case does not warrant this Court's intervention into Defendants' management of their detention centers. Defendants' evolving proactive measures show that they are responsive to the ever-changing threat of COVID-19 and are working to protect their detainees.

### **Factual and Procedural Background**

**Raul Garza.** Garza, a 77-year-old native of Mexico, has been in ICE custody since March 14, 2020. (Dkt. 1 ¶ 79.) He is detained at the Port Isabel Detention Center in Los Fresnos, Texas. (*Id.* ¶ 5.)

Garza is removable because of his lengthy criminal history: he has four convictions for driving while intoxicated, the most recent from September 2015, as well as a March 2017 assault conviction. (Ex. 1 at 3 (charging Garza as removable under Section 212(a)(2)(B) of the INA because he has been convicted of two or more offenses for which the aggregate sentences were five years or more and summarizing the convictions).) In his most recent DWI, which occurred in 2015, Garza was so intoxicated that he drove into a wooden fence. (Ex. 2 at 26–30, 38.) His most recent criminal conviction was for the assault of his girlfriend in March 2017. (*Id.* at 42–45.) Given his numerous convictions, Garza is subject to mandatory detention. (*See* Ex. 1 at 3.)

Garza has been receiving consistent medical care. (*See* Ex. 3 at 64–66.) On April 6, 2020, Garza was examined specifically for COVID-19 symptoms. (*Id.* at 9.) Garza denied that he was experiencing any symptoms of COVID-19, and was educated on social distancing, covering a cough, and frequent a proper hand hygiene. (*Id.*) Garza verbalized that he understood the instructions. (*Id.*)

**ICE Guidance Regarding Custody Reviews.** On April 4, 2020, Peter Berg, an Assistant Director of Field Operations with ICE, circulated guidance to ICE officers regarding the review of cases of aliens who may be at higher risk for serious illness from COVID-19. (Ex. 13.) Expanding on its earlier instruction to review the cases of aliens over age 70 or who are pregnant, ICE Enforcement and Removal Operations (ERO) identified several categories of cases to be reviewed to re-assess custody: pregnant detainees or those having recently delivered babies; detainees over

60 years old; detainees of any age with chronic illness, including blood disorders, chronic kidney disease, compromised immune systems, endocrine disorders, metabolic disorders, heart disease, lung disease, and neurological or neurodevelopment conditions. (*Id.* at 1–2.) The guidance notes, however, that the presence of one of these favors “may not always be determinative.” (*Id.* at 2.)

**ICE ERO COVID-19 Pandemic Response Requirements.** On April 10, 2020, ICE expanded on its earlier guidance and issued COVID-19 Pandemic Response Requirements (PRR) setting forth expectations and assisting ICE detention facility operators to sustain detention operations while mitigating the risk of COVID-19. (Ex. 14 at 3.) The PRR was “developed in consultation with the Centers for Disease Control and Prevention and is a dynamic document that will be updated as additional/revised information and best practices become available.” (*Id.*) Among other requirements, the PRR mandates that all ICE detention facilities comply with CDC guidance. (*Id.* at 5–6.) It sets forth in detail specific requirements for staffing, supplies, hygiene, and cleaning practices. (*Id.* at 8–10.) It also provides screening questions for all staff and new entrants. (*Id.* at 12.) And it provides measures to encourage social distancing. (*Id.* at 13–14.) Finally, it sets forth procedures in the event of a positive COVID-19 case. (*Id.* at 14–16.)

**Port Isabel Detention Center.** ICE epidemiologists have been tracking the outbreak, regularly updating infection-prevention and control protocols, and issuing guidance to field staff on screening and management. (Ex. 4 ¶ 5.) ICE and PIDC are following CDC guidance. (*Id.* ¶ 6.) Each detainee is screened for disabilities upon admission. (*Id.* ¶ 8.) Those disabilities are further evaluated for reasonable accommodations. (*Id.*) At intake at PIDC, detainees are assessed for fever and respiratory illnesses, asked to confirm whether they have had recent contact with a person with COVID-19, and whether they have traveled through areas with sustained community transmission. (*Id.* ¶ 9.) Detainees with potential COVID-19 symptoms are placed in isolated and

tested. (*Id.* ¶ 10.) If they test positive, they will be given appropriate medical treatment, including being taken to a local hospital if necessary. (*Id.*) In cases of known exposure, asymptomatic detainees are placed in cohorts with restricted movement for 14 days. (*Id.* ¶ 11.) They are monitored daily for fever or symptoms of respiratory illness. (*Id.*) Patients have access to healthcare via a daily sick-call process. (*Id.*) All individuals with fever or respiratory symptoms are referred to in-house medical providers. (*Id.*) On-call providers are available after hours to address any concerns. (*Id.*)

There are no confirmed cases of COVID-19 among the detainee population. (*Id.* ¶ 13.) There are no ICE detainees suspected of having COVID-19 and none pending medical testing. (*Id.*) One contact maintenance worker tested positive for COVID-19 on April 1, 2020. (Ex. 5 ¶ 7.) All contract workers who had been in contact with him tested negative and were sent home for a 14-day quarantine. (*Id.*) He did not have any contact with the PIDC detainees. (*Id.*)

PIDC is within its capacity. (Ex. 4 ¶ 14.) PIDC is screening all staff and vendors, including by checking their body temperatures. (*Id.* ¶ 15.) PIDC is screening all detainees at intake, including travel history, medical history, and checking body temperatures. (*Id.* ¶ 16.) PIDC is educating staff and detainees about COVID-19, including the importance of handwashing and hand hygiene, covering coughs, and requesting to seek medical care when needed. (*Id.* ¶ 17.) PIDC has identified housing units to quarantine patients who are suspected or who have tested positive for COVID-19. (*Id.* ¶ 18.)

Plaintiff filed a habeas corpus petition in this Court on April 15, 2020, seeking his immediate release because he claims that his detention violates his substantive due process rights under the Fifth Amendment. (*See generally* Dkt. 1.) Alternatively, he seeks improved conditions at PIDC. (*Id.*) The U.S. Attorney's Office was served on April 23, 2020, and Defendants moved

on that day to sever and transfer Garza's claims to the Brownsville Division. (Dkt. 13.) Because that motion remains pending, Defendants now move to dismiss Plaintiff's claims and respond to his request for immediate injunctive relief, in accordance with this Court's order.

### **Issues**

1. Whether Plaintiff may seek release under habeas corpus due to the conditions of his confinement when the Fifth Circuit has made clear such a claim is not cognizable.

2. Whether Plaintiff may bring a claim directly under the Constitution to seek his release where the Fifth Circuit does not recognize such a claim.

3. Whether Plaintiff states a claim under the Rehabilitation Act where courts across the country have not allowed Rehabilitation Act claims by federal detainees and where Plaintiff does not actually allege he cannot participate in his removal proceedings.

4. Whether this Court should order certain conditions at Port Isabel Detention Center where (i) the Central District of California is already doing so; (ii) Plaintiff does not articulate what improved conditions he would deem satisfactory; and (iii) the Fifth Circuit recently stayed an injunction against the Texas Department of Criminal Justice that imposed detailed COVID-19 prevention measures on the state prisons.

### **Standard**

Rule 12(b)(6) provides for the dismissal of a complaint that fails to state a claim upon which relief can be granted. In ruling on a 12(b)(6) motion, courts may consider the complaint, its attachments and documents incorporated by reference, and matters of which the court may take judicial notice. *Wolcott v. Sebelius*, 635 F.3d 757, 763 (5th Cir. 2011); *see also* FED. R. CIV. P. 201. Courts need not accept a plaintiff's legal conclusions. *Ashcroft v. Iqbal*, 556 U.S. 662, 678 (2009); *Wolcott*, 635 F.3d at 763. "Threadbare recitals of the elements of a cause of action, supported by mere conclusory statements, do not suffice." *Iqbal*, 556 U.S. at 678–79. "[O]nly a complaint that states a plausible claim for relief survives a motion to dismiss." *Id.*

Preliminary injunctive relief is an extraordinary remedy that should not be granted unless the movant establishes the following four elements by a preponderance of the evidence: "(1) there

is a substantial likelihood of success on the merits; (2) there is a substantial threat that irreparable injury will result if the injunction is not granted; (3) the threatened injury outweighs the threatened harm to the defendant; and (4) granting the preliminary injunction will not disserve the public interest.” *Khan v. Fort Bend Indep. Sch. Dist.*, 561 F. Supp. 2d 760, 763 (S.D. Tex. 2008) (citation omitted). The movant must unequivocally show the need for preliminary injunctive relief. *Sepulvado v. Jindal*, 729 F.3d 413, 417 (5th Cir. 2013), *cert. denied*, 134 S. Ct. 1789 (2014) (internal citations and quotations omitted).

The standard is heightened further when a party seeks mandatory preliminary relief that alters the status quo. *Martinez v. Mathews*, 544 F.2d 1233, 1243 (5th Cir. 1976). Although Plaintiff has not yet filed a separate motion for a temporary restraining order or for a preliminary injunction, Defendants respond to his arguments preliminarily. Should Garza’s claims remain in this Court, and should he file a motion, Defendants would ask to be given the opportunity to respond more fully.

### **Argument**

#### **I. Under Fifth Circuit precedent, Plaintiff cannot invoke habeas corpus to challenge the conditions of his confinement.**

Plaintiff invokes habeas corpus to challenge the constitutionality of his conditions of confinement and seeks release. But habeas corpus is not a means by which to challenge conditions of confinement. “Simply stated, habeas is not available to review questions unrelated to the cause of detention.” *Pierre v. United States*, 525 F.2d 933, 935 (5th Cir. 1976). In other words, a plaintiff “cannot avail himself of the writ of habeas corpus when seeking injunctive relief ***unrelated to the cause of his detention.***” *Rourke v. Thompson*, 11 F.3d 47, 49 (5th Cir. 1993) (emphasis added).

The Fifth Circuit, and district courts within this Circuit, have long recognized that habeas corpus actions are the proper vehicle to “challenge the fact or duration of confinement,” whereas

allegations that challenge an individual’s “conditions of confinement” are “properly brought in civil rights actions.” *Schipke v. Van Buran*, 239 F. App’x 85, 85–86 (5th Cir. 2007); *see also Poree v. Collins*, 866 F.3d 235, 243 (5th Cir. 2017) (noting the “instructive principle that challenges to the fact or duration of confinement are properly brought under habeas, while challenges to the conditions of confinement are properly brought under [civil rights actions]”) (citations omitted); *Hernandez v. Garrison*, 916 F.2d 291, 293 (5th Cir. 1990) (holding that claims of overcrowding, denial of medical treatment, and access to an adequate law library were not proper subjects of a habeas corpus petition); *Livas v. Myers*, 2020 WL 1939583, at \*8 (W.D. La. Apr. 22, 2020) (“Neither party nor this Court found a single precedential case in the Fifth Circuit . . . allowing conditions of confinement claims to be brought under § 2241.”); *United States v. Robinson*, 2009 WL 1507130, at \*4 (S.D. Tex. 2009) (“Claims concerning the conditions of confinement are actionable, if at all, under 42 U.S.C. § 1983 or *Bivens v. Six Unknown Federal Narcotics Agents*, 403 U.S. 388 (1971), and not under the habeas corpus statutes.”).

Even when a petitioner alleges that inadequate conditions of confinement create the risk of serious physical injury, illness, or death, a petition for a writ of habeas corpus is not the proper vehicle for such a claim. *See, e.g., Spencer v. Bragg*, 310 F. App’x 678, 679 (5th Cir. 2009) (affirming the lower court’s dismissal of petitioner’s habeas claim even though he alleged that the conditions of confinement endangered his life); *Northup v. Thaler*, 2012 WL 4068676, at \*2 (S.D. Tex. Aug. 7, 2012), *rep. & rec. adopted*, 2012 WL 4068997 (S.D. Tex. Sept. 14, 2012) (dismissing petitioner’s habeas claim based on alleged risk of abuse by other inmates).

The same is true in the civil immigration context. When a Mexican national sought release from ICE custody due to concerns for COVID-19, another member of this Court dismissed the petition, noting, “The Fifth Circuit has not recognized [habeas corpus as a permissible avenue for

relief from alleged inadequate conditions of confinement].” *Sacal-Micha v. Longoria*, 2020 WL 1815691, at \*5 n.6 (S.D. Tex. Apr. 9, 2020) (Rodriguez, J.). Likewise, when civil Border Patrol detainees sought release from custody to cure allegedly unconstitutional conditions, that Court noted, “Any person in custody can obtain relief from allegedly inadequate conditions by being released, but this fact does not create a permissible habeas corpus claim when the complaint turns on the conditions of confinement.” *Rivera Rosa v. McAleenan*, 2019 WL 5191095, at \*18 (S.D. Tex. 2019). *See also Sarres Mendoza v. Barr*, 2019 WL 1227494, at \*2 (S.D. Tex. 2019) (denying Honduran detainee’s motion for leave to amend because the proposed claims on “conditions of confinement may not be brought in a habeas corpus proceeding, and are actionable, if at all, in a civil rights action”); *Patrick v. Whitaker*, 2019 WL 588465, at \*4, n.36 (S.D. Tex. 2019), *appeal dismissed*, 2019 WL 4668409 (5th Cir. 2019) (ICE detainee’s “motion for leave to file supplemental pleadings concerning the conditions of his confinement” is denied because “Petitioner’s proposed claims are not actionable under 28 U.S.C. § 2241.”).

“A detention facility’s protocols for isolating individuals, controlling the movement of its staff and detainees, and providing medical care are part and parcel of the conditions in which the facility maintains custody over detainees.” *Sacal-Micha*, 2020 WL 1815691, at \*4. These conditions of confinement are precisely what Plaintiff challenges here. (*See, e.g.*, Dkt. 1 ¶ 63 (“Once COVID-19 is introduced to the Detention Centers under current conditions, it will be impossible to stop the spread . . . .”); *id.* ¶ 70 (“The ERO PRR is inadequate to provide safe conditions for Petitioners”.) Because his request for release is due to the conditions, the Fifth Circuit has barred his claims. If his habeas claims are allowed here, any detainee could simply seek release to sidestep the Fifth Circuit’s express admonition that habeas corpus is not a means to challenge conditions of confinement. This loophole would swallow the rule.

Finally, habeas corpus is meant to correct only unlawful detention. Plaintiff does not challenge the lawfulness of his custody or the cause of his detention. *See Pierre*, 525 F.2d at 935–36; *Livas*, 2020 WL 1939583, at \*7–8 (denying prisoners’ requests for home confinement because of concerns of COVID-19 and noting that they incorrectly invoked habeas corpus to challenge their lawful imprisonment). Thus, Plaintiff cannot invoke habeas to seek relief unrelated to the cause of his detention. *See Rourke*, 11 F.3d at 49.

**II. Plaintiff’s direct constitutional claims seeking release are not cognizable, and, even if they were, the facts here do not support a constitutional violation.**

**a. Plaintiff does not plead a constitutional violation.**

To the extent Plaintiff brings a direct constitutional claim seeking his release, he may not do so in the Fifth Circuit. “Although there have been a few notable exceptions, the federal courts, and this Circuit in particular, have been hesitant to find causes of action arising directly from the Constitution.” *Alexander v. Trump*, 753 F. App’x 201, 206 (5th Cir. 2018) (rejecting a freestanding constitutional complaint against the FBI seeking injunctive relief). *See also Hearth, Inc. v. Dep’t of Public Welfare*, 617 F.2d 381, 382 (5th Cir. 1980) (citing *Bivens v. Six Unknown Named Agents of the Federal Bureau of Narcotics*, 403 U.S. 388 (1971), as one “notable exception”). Recognizing a claim directly under the Fifth Amendment to order Plaintiff’s release would be a departure from Fifth Circuit precedent. *See Sacal-Micha*, 2020 WL 1815691, at \*5–6.

Even if a direct constitutional claim were cognizable in this Circuit, Plaintiff has not pled it. In a conditions-of-confinement case, “the proper inquiry is whether those conditions amount to punishment of the detainee.” *Bell v. Wolfish*, 441 U.S. 520, 535 (1979). Under Fifth Circuit case law, “isolated examples of illness, injury, or death, standing alone, cannot prove that conditions of confinement are constitutionally adequate. Nor can the incidence of diseases or infections, standing alone, . . . since any densely populated residence may be subject to outbreaks.” *Shepherd*

*v. Dallas Cty.*, 591 F.3d 445, 454 (5th Cir. 2009). A detainee does not establish a case simply by alleging that the detention center has disease or infection present or that it may in the future. “Rather, a detainee . . . must demonstrate a pervasive pattern of serious deficiencies in providing for his basic human needs.” *Id.*

Alternatively, if the detainee challenges an officer’s episodic act or omission, he must demonstrate that the official acted with deliberate indifference to his medical needs or safety. *See, e.g., Gobert v. Caldwell*, 463 F.3d 339, 345 (5th Cir. 2006). Officials disregard a risk to an inmate when they “refuse[] to treat him, ignore[] his complaints, intentionally treat[] him incorrectly, or engage[] in any similar conduct that would clearly evince a wanton disregard for any serious medical needs.” *Domino v. Tex. Dep’t of Criminal Justice*, 239 F.3d 752, 756 (5th Cir. 2001). Plaintiff seems to allege both theories simultaneously. (*See* Dkt. 1 ¶¶ 127–28.)

But Plaintiff’s allegations here do not support either a “pervasive pattern of serious deficiencies in providing for basic human needs” or a “wanton disregard for serious medical needs.” Plaintiff does not allege that Defendants have failed to provide him with any medical care he may require. Rather, his allegations focus on the fact that he is detained with others in typical detention-facility conditions and cannot exercise social distancing. But, even taking these allegations as true, Fifth Circuit expressly forecloses Plaintiff’s claim: “any densely populated residence may be subject to outbreaks,” and the existence of a disease does not state a constitutional violation. *Shepherd*, 591 F.3d at 454. The Fifth Circuit recently reaffirmed this principle in the context of COVID-19 in staying the preliminary injunction order against the Texas Department of Criminal Justice (TDCJ) relating to its COVID-19 prevention procedures. *Valentine v. Collier*, No. 20-20207, 2020 WL 1934431, at \*3 (5th Cir. Apr. 22, 2020) (citing *Shepherd*, 591 F.3d at 454). Where the district court imposed detailed procedures on TDCJ, going beyond CDC

guidance and impeding TDCJ’s ability to adapt to changing circumstances, the Fifth Circuit noted that TDCJ is likely to prevail on the merits of its appeal. *See id.* at \*3–4.

**b. The proactive measures Defendants have taken to prevent COVID-19 show that they are neither punishing Plaintiff nor deliberately indifferent to his needs.**

In staying the district court’s injunction against TDCJ, the Fifth Circuit found that Texas prisoners challenging the prisons’ COVID-19 measures failed to show deliberate indifference because “the evidence shows that TDCJ has taken and continues to take measures— informed by guidance from the CDC and medical professionals—to abate and control the spread of the virus.” *Valentine*, 2020 WL 1934431, at \*4. The same is true here.

Port Isabel Detention Center has taken extensive measures to prevent COVID-19:

- ICE epidemiologists have been tracking the outbreak, regularly updating infection-prevention and control protocols, and issuing guidance to field staff on screening and management. (*Ex. 4 ¶ 5.*)
- ICE and PIDC are following CDC guidance. (*Id. ¶ 6.*)
- On April 10, 2020, ICE released the ICE ERO COVID-19 Pandemic Responsive Requirements (*Ex. 7.*)
- Each detainee is screened for disabilities upon admission. (*Ex. 4 ¶ 8.*) Those disabilities are further evaluated for reasonable accommodations. (*Id.*)
- At intake at PIDC, detainees are assessed for fever and respiratory illnesses, asked to confirm whether they have had recent contact with a person with COVID-19, and whether they have traveled through areas with sustained community transmission. (*Id. ¶ 9.*)
- Detainees with potential COVID-19 symptoms are placed in isolated and tested. (*Id. ¶ 10.*) If they test positive, they will be given appropriate medical treatment, including being taken to a local hospital if necessary. (*Id.*)
- In cases of known exposure, asymptomatic detainees are placed in cohorts with restricted movement for 14 days. (*Id. ¶ 11.*) They are monitored daily for fever or symptoms of respiratory illness. (*Id.*)
- Patients have access to healthcare via a daily sick-call process. (*Id.*)

- All individuals with fever or respiratory symptoms are referred to in-house medical providers. (*Id.*)
- On-call providers are available after hours to address any concerns. (*Id.*)
- There are no confirmed cases of COVID-19 among the detainee population. (*Id.* ¶ 13.)
- There are no ICE detainees suspected of having COVID-19 and none pending medical testing. (*Id.*)
- One contact maintenance worker tested positive for COVID-19 on April 1, 2020. (Ex. 5 ¶ 7.) All contract workers who had been in contact with him tested negative and were sent home for a 14-day quarantine. (*Id.*) He did not have any contact with the PIDC detainees. (*Id.*)
- PIDC is within its capacity. (Ex. 4 ¶ 14.)
- PIDC is screening all staff and vendors, including by checking their body temperatures. (*Id.* ¶ 15.)
- PIDC is screening all detainees at intake, including travel history, medical history, and checking body temperatures. (*Id.* ¶ 16.)
- PIDC is educating staff and detainees about COVID-19, including the importance of handwashing and hand hygiene, covering coughs, and requesting to seek medical care when needed. (*Id.* ¶ 17.)
- PIDC has identified housing units to quarantine patients who are suspected or who have tested positive for COVID-19. (*Id.* ¶ 18.)

Based on these steps that Defendants have taken to protect detainees during the pandemic,

Plaintiff cannot show a constitutional violation. *See Sacal-Micha*, 2020 WL 1815691, at \*6 (“But ultimately, Sacal does not assert that Respondents are doing nothing to protect him, other detainees, and staff members from COVID-19, but only that Respondents are not doing *enough*. . . . Courts have refused to provide habeas relief even when the claimed inadequacies allegedly placed the petitioner in grave peril.”). Further, to the extent Plaintiff argues that all the steps taken by Defendants are still inadequate to “fully guarantee [Plaintiff’s] safety,” that is not the applicable standard, and release is still not warranted. *See Sacal-Micha v. Longoria*, 2020 WL 1518861, at \*6 (S.D. Tex. Mar. 27, 2020). (“[I]t is possible that despite ICE’s best efforts, Sacal may be exposed

and contract the virus. . . . But the fact that ICE may be unable to implement the measures that would be required to fully guarantee Sacal’s safety does not amount to a violation of his constitutional rights and does not warrant his release.”). *See also Jorge V. S. v. Green*, 2020 WL 1921936, at \*3 (D.N.J. Apr. 21, 2020) (“That these steps [by ICE in accordance with CDC guidance for detention facilities] do not guarantee Petitioner will remain healthy and free of the disease is immaterial, the constitution requires no such perfection.”); *Dawson v. Asher*, 2020 WL 1704324, at \*12 (W.D. Wash. Apr. 8, 2020) (“No one can entirely guarantee safety in the midst of a global pandemic. However, the standard under which the court evaluates Petitioners’ second TRO motion is not guaranteed safety—an impossible standard to meet no matter the circumstances—but rather a likelihood of irreparable harm.”).

### **III. Plaintiff does not state a claim under the Rehabilitation Act.**

- a. Courts across the country do not recognize Rehabilitation Act claims by federal detainees, and Plaintiff’s claim relating to his removal procedures are barred.**

Plaintiff brings claims under Section 504 of the Rehabilitation Act and alleges that Defendants have failed to provide reasonable accommodations for his disabilities and have excluded him from federal programs or activities because of his disabilities. He seeks either improved conditions or release from custody. Plaintiff do not state what improved conditions he would find satisfactory; rather, he simply alleges that Defendants have failed to “employ[] the only known means of protecting [Plaintiff] from infection.” (Dkt. 1 ¶ 143.)

The Rehabilitation Act’s remedies section does not provide for a private right of action for Plaintiff. *See* 29 U.S.C. § 794a(a)(2) (providing causes of action only to those aggrieved by an action of a recipient of federal assistance or a federal provider of assistance); *see also De Dandrade v. U.S. Dep’t of Homeland Sec.*, 367 F. Supp. 3d 174, 190–91 (S.D.N.Y. 2019). “[P]rivate rights of action to enforce federal law must be created by Congress.” *Alexander v. Sandoval*, 532 U.S.

275, 286 (2001). Where there is no express private right, courts “begin with the presumption that Congress did not intend one.” *Bellikoff v. Eaton Vance Corp.*, 481 F.3d 110, 116 (2d Cir. 2007). Here, where the Rehabilitation Act expressly provides for causes of action and remedies for certain aggrieved persons but not for those aggrieved by Executive agencies, “there is strong indication that Congress did not intend for a private remedy to accompany the right to be free from discrimination from any Executive agency.” *De Dandrade*, 367 F. Supp. 3d at 192. If Plaintiff has a cause of action here, it would be implied only. *See Mathis, v. GEO Group, Inc.*, 2009 WL 10736631, at \*6 (E.D.N.C. Nov. 9, 2009) (analyzing in depth the availability of a Rehabilitation Act claim by a federal detainee against his detention center).

Though Defendants are unaware of a Fifth Circuit ruling on the issue, courts across the country—including a court in this Circuit—have held that federal detainees may not bring Rehabilitation Act claims against the federal agencies housing them. *See, e.g., Roark v. Flanery*, 2014 WL 4447451, at \*27 (E.D. Tex. Sept. 9, 2014) (“[T]he Bureau of Prisons does not fit within the definition of ‘programs or activities’ governed by § 794(a).”); *Hurtado v. Reno*, 34 F. Supp. 2d 1261, 1264 (D. Colo. 1999) (holding that an immigration detainee could not bring a Rehabilitation Act claim against INS, the predecessor to ICE); *Williams v. Meese*, 926 F.2d 994, 997 (10th Cir. 1991) (holding that Rehabilitation Act does not apply to federal prisons); *Inko-Tariah v. Lappin*, 2009 WL 8652932, at \*1 (E.D.N.C. Apr. 1, 2009), *aff’d*, 346 F. App’x 915 (4th Cir. 2009) (“Upon a thorough review of cases interpreting the application of the Rehabilitation Act, the court concludes that the Act does not provide a cause of action for inmates in federal prisons.”); *Sandler v. Anderson*, 2008 WL 2610130, at \*2 (W.D. Mo. July 2, 2008) (“[T]he Rehabilitation Act does not apply to federal inmates.”).

Moreover, even if the Rehabilitation Act provided a claim as a general matter, Plaintiff's claims here would be barred under 8 U.S.C. § 1252(b)(9) and (g). Those sections bar district courts from reviewing challenges to the removal process. When aliens brought due process, Administrative Procedure Act, and Rehabilitation Act claims challenging the holding of removal proceedings through video teleconferencing because the VTC policy harmed their "ability to meaningfully participate in their removal proceedings," the District Court for the Southern District of New York ruled that it did not have jurisdiction to hear their claims. *P.L. v. U.S. Immigration & Customs Enf't*, 2019 WL 2568648, at \*2 (S.D.N.Y. June 21, 2019). The court held that challenges to "[h]ow immigrants appear for removal proceedings constitutes part of the process of these proceedings" and therefore are barred under § 1252(b)(9). *Id.* at \*3. Because the plaintiffs were challenging "part of the process by which . . . removability will be determined," the court did not have jurisdiction. *Id.* To the extent Plaintiff actually pleads a lack of access to his removal proceedings, the same would be true here.

**b. Even if he could bring a Rehabilitation Act claim, Plaintiff alleges in only conclusory fashion that he has been excluded from activities or programs because of his disabilities.**

The Fifth Circuit has held that claims under Title II of the ADA and claims under § 504 of the Rehabilitation Act be treated identically from a jurisprudential standpoint. *Bennett–Nelson v. Louisiana Board of Regents*, 431 F.3d 448, 454–55 (5th Cir.2005). To make out a prima facie case under Title II or the Rehabilitation Act, a plaintiff must show "(1) that he is a qualified individual within the meaning of the ADA; (2) that he is being excluded from participation in, or being denied benefits of, services, programs, or activities for which the public entity is responsible, or is otherwise being discriminated against by the public entity; and (3) that such exclusion, denial of benefits, or discrimination is by reason of his disability." *Cadena v. El Paso County*, 946 F.3d 717, 723 (5th Cir. 2020) (citation omitted).

A public entity's failure to make reasonable modifications or accommodations may constitute denial of services. *Garrett v. Thaler*, 560 F. App'x 375, 382 (5th Cir. 2014). But “[t]he ADA provides for reasonable accommodation, not preferred accommodation.” *Arce v. Louisiana*, 226 F. Supp. 3d 643, 651 (E.D. La. 2016) (citing *EEOC v. Agro Distrib.*, 555 F.3d 462, 471 (5th Cir. 2009)). The accommodation of an inmate's disability need not be ideal; instead, it need only be reasonable and effective. *Id.* (citations omitted). Further, courts generally accord detention settings deference in determining the appropriate accommodations. See *Wells v. Thaler*, 460 F. App'x 303, 313 (5th Cir. 2012) (“[O]ur conclusion that the provided auxiliary aids and services are sufficient is informed by the context of this suit—a correctional facility—and we accord the officials at the Estelle Unit deference in their determination of an appropriate accommodation.”).

“The ADA is not violated by ‘a prison’s simply failing to attend to the medical needs of its disabled prisoners.’” *Nottingham v. Richardson*, 499 F. App'x 368, 377 n.7 (5th Cir. 2012) (citing *Bryant v. Madigan*, 84 F.3d 246, 249 (7th Cir.1996) and *Olmstead v. L.C. ex rel. Zimring*, 527 U.S. 581, 603 n.14 (1999) (“We do not in this opinion hold that the ADA imposes on the States a ‘standard of care’ for whatever medical services they render, or that the ADA requires States to ‘provide a certain level of benefits to individuals with disabilities.’”)). Instead, Plaintiff must allege that he was “discriminated against based on [his] disability.” *Id.* (denying Rehabilitation Act claim because “[t]here is no evidence that the allegedly improper action of leaving Nottingham on the floor of the transit van had any connection to his alleged disability” of having a “limited ability to walk”).

Here, Plaintiff has failed to allege any facts that he has been treated differently by reason of his alleged disabilities. He alleges only in conclusory fashion that he is being excluded from the “removal process” and the detention centers’ programs and activities because of their disabilities.

(Dkt. 1 ¶ 141.) Plaintiff does not allege, however, that he has actually been unable to attend a court hearing, or to submit any filings, or to speak with his counsel. Plaintiff also does not set forth the detention center activities or programs in which he has not been able to participate or explain how releasing him would allow for their participation. Indeed, under Plaintiff’s logic, every detainee claiming a disability must be released under the Rehabilitation Act so that they may participate in the services of the detention facility. This proposed solution defeats its own purpose and shows why the Rehabilitation Act is an improper vehicle for Plaintiff’s grievances: release would totally deny Plaintiff access to detention center services.

Further, Plaintiff’s failure-to-accommodate allegations are conclusory. He alleges that ICE failed to “reasonably accommodate” his “disabilities by failing to ameliorate the conditions that prevent [him] from employing the only known means of protecting [himself] from infection or by failing to release [him] from the Detention Center[.]” (Dkt. 1 ¶ 143.) Even if Plaintiff otherwise had a Rehabilitation Act claim, these allegations are insufficient to show that ICE’s actions have been less than reasonable for several reasons.

First, Plaintiff fails to cite any authority that remotely suggests that detainees subject to detention under the INA are entitled to release under the Rehabilitation Act so that they can participate in their removal proceedings. Second, the argument that release is a required “reasonable accommodation” so that detainees can participate in removal proceedings is absurd on its face because, as the Supreme Court has recognized, “detention during deportation proceedings [is] a constitutionally valid aspect of the deportation process.” *Demore v. Kim*, 538 U.S. 510, 523 (2003). This is because “deportation proceedings ‘would be vain if those accused could not be held in custody pending the inquiry into their true character.’” *Id.* (quoting *Wong*

*Wing v. United States*, 163 U.S. 228, 235 (1896)); *Carlson v. Landon*, 342 U.S. 524, 538 (1952) (“Detention is necessarily a part of . . . deportation.”).

Moreover, Plaintiff acknowledges that ICE has taken numerous steps to protect detainees. (See e.g., Dkt. 1 ¶ 68 (“On April 4, 2020, ICE determined that its Field Office Directors should reassess custody of detainees ‘over 60 years old’ and detainees who are ‘immune-compromised,’ including individuals with ‘heart disease.’”); *id.* ¶ 69 (“On or about April 13, 2020, . . . Respondent ICE issued a policy document for ICE detention facilities requiring detention facilities to take certain measures regarding COVID-19 . . .”)). These documents provide guidance and directives as to individuals whose custody status should be re-assessed, as well as the mandated practices regarding “social distancing” measures, “hygiene,” “cleaning/disinfecting practices,” “signage,” and other requirements. While Plaintiff may argue nothing short of release is adequate, the Rehabilitation Act requires “reasonable” accommodations, not his preferred accommodation of release.

#### **IV. This Court should not micromanage PIDC’s measures to prevent COVID-19.**

This Court should not force PIDC to implement particular measures in response to COVID-19. First, as a matter of judicial comity, this Court should not order improved conditions while the Central District of California is already in the process. *See Fraihat v. U.S. Immigration & Customs Enf’t*, 2020 WL 1932570, at \*16, 29 (C.D. Cal. Apr. 20, 2020) (certifying a nationwide class of vulnerable ICE detainees with Fifth Amendment and Rehabilitation Act claims, and ordering preliminary relief). A different ruling here risks conflicting instructions.

Second, at this stage, any improvements ordered by the Court would be *sua sponte*. Plaintiff vaguely asks the Court to “order Respondents to provide Petitioners with protection from the risk of contracting COVID-19 by ameliorating all conditions that prevent Petitioners from

implementing the public health recommendations that are the only known means of preventing against and mitigating the effects of COVID-19.” (Dkt. 1 at 36.) But Plaintiff does not articulate what this order might look like.

Third, assuming Plaintiff would ask this Court to order detailed preventative measures, the Fifth Circuit recently ruled that doing so is improper. The Fifth Circuit stayed an injunction against TDCJ that “regulates in minute detail the cleaning intervals for common areas, the types of bleach-based disinfectants the prison must use, the alcohol content of hand sanitizer that inmates must receive, mask requirements for inmates, and inmates’ access to tissues (among many other things).” *Valentine*, 2020 WL 1934431, at \*1. Finding that TDCJ was likely to succeed in its appeal, the Fifth Circuit noted, “Although the district court might do things differently, mere ‘disagreement’ with TDCJ’s medical decisions does not establish deliberate indifference.” *Id.* at \*4. The court further noted that the harm to TDCJ was “particularly acute” because the order “interferes with the rapidly changing and flexible system-wide approach that TDCJ has used to respond to the pandemic so far.” *Id.* at \*5. The same would be true here where ICE’s response is continually evolving to combat COVID-19. (See Ex. 10 ¶ 14 & Ex. 14 at 3.)

#### **V. The public interest favors Plaintiff’s continued detention.**

Concern for potential exposure to COVID-19 is shared by all, but mandating release of ICE detainees is against the public interest. The public interest in enforcement of immigration laws is significant. *United States v. Martinez-Fuerte*, 428 U.S. 543, 556–58 (1976); *Blackie’s House of Beef, Inc. v. Castillo*, 659 F.2d 1211, 1221 (D.C. Cir. 1981) (“The Supreme Court has recognized that the public interest in enforcement of the immigration laws is significant.”); *see also Nken v. Holder*, 556 U.S. 418, 435 (2009) (“There is always a public interest in prompt execution of removal orders: The continued presence of an alien lawfully deemed removable undermines the

streamlined removal proceedings IIRIRA established, and permit[s] and prolong[s] a continuing violation of United States law.”) (internal marks omitted).

The public interest is also best served by allowing the orderly medical processes and protocols implemented by government professionals to remain in place. *See Youngberg v. Romeo*, 457 U.S. 307, 322–23 (1982). PIDC has taken extensive proactive steps to try to prevent the introduction of COVID-19 into the facility.

### **Conclusion**

If the Court transfers Garza’s claims to the Brownsville Division, Defendants respectfully ask that the Court deny this motion as moot. Otherwise, Defendants respectfully request that the Court grant this motion and dismiss Garza’s claims in their entirety.

Respectfully submitted,

**Subject:** Updated Guidance: COVID-19 Detained Docket Review-- Effective Immediately  
**Date:** Saturday, April 4, 2020 5:17:40 PM

---

**UPDATE: Please see the updated guidance below. The previous version of this guidance is rescinded.**

**This message is sent from Peter B. Berg, (a)Assistant Director, Field Operations**

**To:** Field Office Directors and Deputy Field Office Directors  
**Subject:** COVID-19 Detained Docket Review

**Background:**

U.S. Immigration and Customs Enforcement (ICE) has taken a number of significant and proactive measures in response to the Coronavirus Disease 2019 (COVID-19) pandemic, in order to mitigate the spread of COVID-19 to aliens detained in its custody, its workforce, and stakeholders at its detention facilities. As more becomes known about the virus, ERO will continue to update its practices and guidance in this regard. General ICE COVID-19 guidance is available [here](#) and will be updated and supplemented on an ongoing basis.

On March 18, 2020, you were directed to review the cases of aliens detained in your area of responsibility who were over the age of 70 or pregnant to determine whether continued detention was appropriate. The Centers for Disease Control and Prevention (CDC) has developed a [list](#) of categories of individuals identified as potentially being at higher-risk for serious illness from COVID-19. Expanding on that list, ERO has identified the following categories of cases that should be reviewed to re-assess custody:

- Pregnant detainees or those having delivered in the last two weeks
- Detainees over 60 years old
- Detainees of any age having chronic illnesses which would make them immune-compromised, including but not limited to:
  - Blood Disorders
  - Chronic Kidney Disease
  - Compromised immune system (e.g., ongoing treatment such as chemotherapy or radiation, received an organ or bone marrow transplant, taking high doses of corticosteroids or other immunosuppressant medications)
  - Endocrine disorders

- Metabolic disorders
- Heart disease
- Lung disease
- Neurological and neurologic and neurodevelopment conditions

As part of your ongoing application of the CDC's Interim Guidance on Management of Coronavirus Disease 2019 (COVID-19) in Correctional and Detention Facilities (available [here](#)), please identify all cases within your AOR that meet any of the criteria above and validate that list with assistance from IHSC or your Field Medical Coordinator to ensure the conditions listed are still present and do result in the detainee potentially having a higher risk for serious illness from COVID-19. After identifying a case as meeting any of the above criteria, you should review the case to determine whether continued detention remains appropriate in light of the COVID-19 pandemic.

The presence of one of the factors listed above should be considered a significant discretionary factor weighing in favor of release. To be clear, however, it may not always be determinative. Field offices must remain cognizant of the requirements of mandatory detention. Section 236(c) of the Immigration and Nationality Act (INA) mandates the detention of certain categories of criminal and terrorist aliens during the pendency of removal proceedings. Such aliens may not be released in the exercise of discretion during the pendency of removal proceedings even if potentially higher-risk for serious illness from COVID-19. INA § 236(c); 8 C.F.R. § 236.1(c)(1)(i). Such aliens may only be released following a final order issued by an immigration judge, the Board of Immigration Appeals, or a federal court granting the alien relief, dismissing proceedings, or terminating proceedings. Similarly, pursuant to section 241(a)(2), certain criminal and terrorist aliens subject to a final order of removal may not be released during the 90-day removal period even if potentially higher-risk for serious illness from COVID-19. INA § 241(a)(2). For alien's subject to discretionary detention under section 236(a), please remember that release is prohibited, even if the alien is potentially higher-risk for serious illness from COVID-19, if such release would pose a danger to property or persons. 8 C.F.R. § 236.1(c)(8).

When reviewing cases of alien's subject to discretionary detention under 236(a), the following must be completed:

- **Cases involving any arrests or convictions for any crimes that involve risk to the public regardless of the date of arrest or conviction must be reviewed and approved by a Deputy Field Office Director (DFOD) or higher before a determination is made to release.**
  - Examples of crimes that involve a risk to the public include any crime that: involves any form of violence, driving while intoxicated, threatening behaviors, terroristic threats, stalking, domestic violence, harm to a child, or any form of assault or battery. This list is not intended to be

comprehensive. If there is any doubt whether a crime involves risk to the public, consult with your Office of the Principal Legal Advisor (OPLA) field location and your respective Deputy Assistant Director for Domestic Operations before a custody redetermination is completed.

- You may consider the age of an arrest or conviction as a mitigating or an aggravating factor, but the age of an arrest or a conviction does not automatically outweigh public safety concerns.

With regard to arriving aliens and certain other aliens eligible for consideration of parole from custody, under current circumstances and absent significant adverse factors, the fact that an alien is potentially higher-risk for serious illness from COVID-19, may form the basis for a determination that “continued detention is not in the public interest,” justify release under 8 C.F.R. § 212.5(b) (5).

For other aliens for whom there is discretion to release, field offices remain responsible for articulating individualized custody determinations, taking into consideration the totality of the circumstances presented in the case. The fact that an alien is potentially higher-risk for serious illness from COVID-19 should be considered a factor weighing in favor of release. You may also consider alternatives to detention consistent with ICE ATD policies, if ATD is determined to sufficiently mitigate the risk of flight.

Any releases attributed to reviews of COVID-19 susceptibility shall be documented in the ENFORCE Alien Removal Module (EARM) under Special Class - COVID-19 Chronic Care Release. As previously communicated, these individuals should be placed on ATD if possible.

Please contact your local OPLA field location should you have any questions or concerns regarding your authority to release in any individual case.

**For any questions on this guidance, please contact your respective Deputy Assistant Director for Domestic Operations.**

**Limitation on the Applicability of this Guidance.** This message is intended to provide internal guidance to the operational components of U.S. Immigration and Customs Enforcement. It does not, is not intended to, shall not be construed to, and may not be relied upon to create any rights, substantive or procedural, enforceable at law by any person in any matter, civil or criminal.

## PURPOSE AND SCOPE

The U.S. Immigration and Customs Enforcement (ICE) Enforcement and Removal Operations (ERO) Coronavirus Disease 2019 (COVID-19) Pandemic Response Requirements (PRR) sets forth expectations and assists ICE detention facility operators to sustain detention operations, while mitigating risk to the safety and well-being of detainees, staff, contractors, visitors, and stakeholders due to COVID-19. Consistent with ICE's overall adjustments to its immigration enforcement posture,<sup>1</sup> the ERO PRR builds upon previously issued guidance and sets forth specific mandatory requirements expected to be adopted by all detention facilities housing ICE detainees, as well as best practices for such facilities, to ensure that detainees are appropriately housed and that available mitigation measures are implemented during this unprecedented public health crisis. The ERO PRR has been developed in consultation with the Centers for Disease Control and Prevention (CDC) and is a dynamic document that will be updated as additional/revised information and best practices become available.

## INTRODUCTION

As the CDC has explained:

COVID-19 is a communicable disease caused by a novel (new) coronavirus, SARS-CoV-2, that was first identified as the cause of an outbreak of respiratory illness that began in Wuhan Hubei Province, People's Republic of China (China).

COVID-19 appears to spread easily and sustainably within communities. The virus is thought to transfer primarily by person-to-person contact through respiratory droplets produced when an infected person coughs or sneezes; it may transfer through contact with surfaces or objects contaminated with these droplets. There is also evidence of asymptomatic transmission, in which an individual infected with COVID-19 is capable of spreading the virus to others before exhibiting symptoms. The ease of transmission presents a risk of a surge in hospitalizations for COVID-19, which would reduce available hospital capacity. Such a surge has been identified as a likely contributing factor to the high mortality rate for COVID-19 cases in Italy and China.

Symptoms include fever, cough, and shortness of breath, and typically appear 2-14 days after exposure. Manifestations of severe disease include severe pneumonia, acute respiratory distress syndrome (ARDS), septic shock, and multi-organ failure. According to the [World Health Organization], approximately 3.4% of reported COVID-19 cases have resulted in death globally. This mortality rate is higher among older adults or those with compromised immune systems. Older adults and people who have severe chronic medical conditions like heart, lung or kidney disease are also at higher risk for more serious COVID-19 illness. Early data suggest older people are twice as likely to have serious COVID-19 illness.

---

<sup>1</sup> See, e.g., Attachment A, U.S. Immigration and Customs Enforcement, *Updated ICE statement on COVID-19* (Mar. 18, 2020), <https://www.ice.gov/news/releases/updated-ice-statement-covid-19>.

Notice of Order Under Sections 362 and 365 of the Public Health Service Act Suspending Introduction of Certain Persons From Countries Where a Communicable Disease Exists, 85 Fed. Reg. 17060 (Mar. 26, 2020) (internal citations omitted).

Given the seriousness and pervasiveness of COVID-19, ICE is taking necessary and prompt measures in response. ICE is providing guidance on the minimum measures required for facilities housing ICE detainees to implement to ensure consistent practices throughout its detention operations and the provision of medical care across the full spectrum of detention facilities to mitigate the spread of COVID-19. The ICE detention standards applicable to all facilities used to house ICE detainees have long required that each such facility have written plans that address the management of infectious and communicable diseases, including, but not limited to, testing, isolation, prevention, treatment, and education. Those requirements include reporting and collaboration with local or state health departments in accordance with state and local laws and recommendations.<sup>2</sup> The measures set forth in the PRR, allow ICE personnel and detention providers to properly discharge their obligations under those standards in light of the unique challenges posed by COVID-19.

## OBJECTIVES

The ERO PRR is designed to establish consistency across ICE detention facilities by establishing mandatory requirements and best practices all detention facilities housing ICE detainees are expected to follow during the COVID-19 pandemic. Consistent with ICE detention standards, all facilities housing ICE detainees are required to have a COVID-19 mitigation plan that meets the following four objectives:

- To protect employees, contractors, detainees, visitors to the facility, and stakeholders from exposure to the virus;
- To maintain essential functions and services at the facility throughout the pendency of the pandemic;
- To reduce movement and limit interaction of detainees with others outside their assigned housing units, as well as staff and others, and to promote social distancing within housing units; and
- To establish means to monitor, cohort, quarantine, and isolate the sick from the well.<sup>3</sup>

---

<sup>2</sup> See, e.g., Attachment B, ICE National Detention Standards 2019, Standard 4.3, Medical Care, at II.D.2 (p. 114), [https://www.ice.gov/doclib/detention-standards/2019/4\\_3.pdf](https://www.ice.gov/doclib/detention-standards/2019/4_3.pdf); Attachment C, 2011 ICE Performance-Based National Detention Standards (PBNDS), Revised 2016, Standard 4.3, Part V.C.1 (p. 261), <https://www.ice.gov/doclib/detention-standards/2011/4-3.pdf>; Attachment D, 2008 ICE PBNDS, Standard 4-22, Medical Care, V.C.1 (pp. 5-6), [https://www.ice.gov/doclib/dro/detention-standards/pdf/medical\\_care.pdf](https://www.ice.gov/doclib/dro/detention-standards/pdf/medical_care.pdf).

<sup>3</sup> A *cohort* is a group of persons with a similar condition grouped or housed together for observation over a period of time. Isolation and quarantine are public health practices used to protect the public from exposure to individuals who have or may have a contagious disease. For purposes of this document, and as defined by the CDC, *quarantine* as the separation of a person or group of people reasonably believed to have been exposed to a communicable disease but not yet symptomatic, from others who have not been

## CONCEPT OF OPERATIONS

The ERO PRR is intended for use across ICE's entire detention network, applying to all facilities housing ICE detainees, including ICE-owned Service Processing Centers, facilities operated by private vendors, and facilities operated by local government agencies that have mixed populations of which ICE detainees comprise only a small fraction.

---

### DEDICATED ICE DETENTION FACILITIES

---

*All ICE dedicated detention facilities<sup>4</sup> must:*

- Comply with the provisions of their relevant ICE contract or service agreement.
- Comply with the ICE national detention standards applicable to the facility, generally the [Performance-Based National Detention Standards 2011](#) (PBNDS 2011).
- Comply with the CDC's [Interim Guidance on Management of Coronavirus Disease 2019 \(COVID-19\) in Correctional and Detention Facilities](#) (Attachment E).
- Follow ICE's March 27, 2020 Memorandum to Detention Wardens and Superintendents on COVID-19 Action Plan Revision 1, and subsequent updates (Attachment F).
- Report all confirmed and suspected COVID-19 cases to the local ERO Field Office Director (or designee), Field Medical Coordinator, and local health department immediately.
- Notify both the local ERO Field Office Director (or designee) and the Field Medical Coordinator as soon as practicable, but in no case more than 12 hours after identifying any detainee who meets the CDC's identified populations potentially being at higher-risk for serious illness from COVID-19, including:
  - People aged 65 and older
  - People of all ages with underlying medical conditions, particularly if not well controlled, including:
    - People with chronic lung disease or moderate to severe asthma
    - People who have serious heart conditions
    - People who are immunocompromised

---

exposed, to prevent the possible spread of the communicable disease. For purposes of this document, and as defined by the CDC, *isolation* as the separation of a person or group of people known or reasonably believed to be infected with a communicable disease and potentially infectious from others to prevent the spread of the communicable disease.

<sup>4</sup> Dedicated detention facilities are facilities that house only ICE detainees. Dedicated facilities may be ICE-owned Service Processing Centers, privately owned Contract Detention Facilities, or facilities operated by state or local governments that hold no other detention populations except ICE detainees.

- Many conditions can cause a person to be immunocompromised, including cancer treatment, smoking, bone marrow or organ transplantation, immune deficiencies, poorly controlled HIV or AIDS, and prolonged use of corticosteroids and other immune weakening medications
  - People with severe obesity (body mass index [BMI] of 40 or higher)
  - People with diabetes
  - People with chronic kidney disease undergoing dialysis
  - People with liver disease

Notification shall be made via e-mail from the facility's Health Services Administrator (HSA) (or equivalent) and contain the following subject line for ease of identification: "Notification of COVID-19 High Risk Detainee (A-Number)." At a minimum the HSA will provide the following information:

- Detainee name
- Detention location
- Current medical issues as well as medications currently prescribed
- Facility medical Point of Contact (POC) and phone number

---

#### NON-DEDICATED ICE DETENTION FACILITIES

---

*All non-dedicated detention facilities and local jails housing ICE detainees must:*

- Comply with the provisions of their relevant ICE contract or service agreement.
- Comply with the ICE national detention standards applicable to the facility, generally [PBNDS 2011](#).
- Comply with the [CDC Interim Guidance on Management of Coronavirus Disease 2019 \(COVID-19\) in Correctional and Detention Facilities](#).
- Report all confirmed and suspected COVID-19 cases to the local ERO Field Office Director (or designee), Field Medical Coordinator, and local health department immediately.
- Notify both the ERO Field Office Director (or designee) and Field Medical Coordinator as soon as practicable, but in no case more than 12 hours after identifying any detainee who meets the CDC's identified populations potentially being at higher-risk for serious illness from COVID-19, including:
  - People aged 65 and older
  - People of all ages with underlying medical conditions, particularly if not well controlled, including:
    - People with chronic lung disease or moderate to severe asthma
    - People who have serious heart conditions
    - People who are immunocompromised

- Many conditions can cause a person to be immunocompromised, including cancer treatment, smoking, bone marrow or organ transplantation, immune deficiencies, poorly controlled HIV or AIDS, and prolonged use of corticosteroids and other immune weakening medications
  - People with severe obesity (body mass index [BMI] of 40 or higher)
  - People with diabetes
  - People with chronic kidney disease undergoing dialysis
  - People with liver disease

Notification should be made via e-mail from the facility's HSA (or equivalent) and should contain the following subject line for ease of identification: "Notification of COVID-19 High Risk Detainee (A-Number)." Other standardized means of communicating this information to ICE are acceptable. At a minimum the HSA will provide the following information:

- Detainee name
- Detention location
- Current medical issues as well as medications currently prescribed
- Facility medical POC and phone number

---

#### ALL FACILITIES HOUSING ICE DETAINES

---

*In addition to the specific measures listed above, all detention facilities housing ICE detainees must also comply with the following:*

#### **PREPAREDNESS**

Administrators can plan and prepare for COVID-19 by ensuring that all persons in the facility know the symptoms of COVID-19 and how to respond if they develop symptoms. Other essential actions include developing contingency plans for reduced workforces due to absences, coordinating with public health and correctional partners, and communicating clearly with staff and detainees about these preparations and how they may temporarily alter daily life.

- **Develop information-sharing systems with partners.**
  - Identify points of contact in relevant state, local, tribal, and/or territorial public health department before cases develop.
  - Communicate with other correctional and detention facilities in the same geographic area to share information including disease surveillance and absenteeism patterns among staff.
- **Review existing pandemic, influenza, all-hazards, and disaster plans, and revise for COVID-19, and ensure that they meet the requirements of ICE's detention standards.**

➤ Offer the seasonal influenza vaccine to all detained persons (existing populations and new intakes) and staff throughout the influenza season, where possible.

➤ Staffing

- Review sick leave policies to ensure that staff can stay home when sick and determine which officials will have the authority to send symptomatic staff home. Staff who report for work with symptoms of COVID-19 must be sent home and advised to follow CDC-recommended steps for persons exhibiting COVID-19 symptoms.
- Staff who test positive for COVID-19 must inform their workplace and personal contacts immediately. If a staff member has a confirmed COVID-19 infection, the relevant employers will inform other staff of their possible exposure to COVID-19 in the workplace consistent with any legal limitations on the sharing of such information. Exposed employees must then self-monitor for symptoms (i.e., fever, cough, or shortness of breath).
- Identify staff whose duties would allow them to work from home and allow them to work from home in order to promote social distancing and further reduce the risk of COVID-19 transmission.
- Determine minimum levels of staff in all categories required for the facility to function safely.
- Follow the Public Health Recommendations for Community-Related Exposure.<sup>5</sup>

➤ Supplies

- Ensure that sufficient stocks of hygiene supplies (soap, hand sanitizer, tissues), personal protective equipment (PPE) (to include facemasks, N95 respirators, eye protection, disposable medical gloves, and disposable gowns/one-piece coveralls), and medical supplies (consistent with the healthcare capabilities of the facility) are on hand, and have a plan in place to restock as needed if COVID-19 transmission occurs within the facility.
- Note that shortages of N95 respirators are anticipated during the COVID-19 response. Based on local and regional situational analysis of PPE supplies, face masks should be used when the supply chain of N95 respirators cannot meet the demand.
- Follow COVID-19: Strategies for Optimizing the Supply of PPE.<sup>6</sup>
- Soiled PPE items should be disposed in leak-proof plastic bags that are tied at the top and not re-opened. Bags can be disposed of in the regular solid waste stream.

---

<sup>5</sup> Attachment G, Centers of Disease Control and Prevention, *Public Health Recommendations for Community-Related Exposure*, <https://www.cdc.gov/coronavirus/2019-ncov/php/public-health-recommendations.html> (last visited Apr. 9, 2020).

<sup>6</sup> Attachment H, Centers for Disease Control and Prevention, *Strategies to Optimize the Supply of PPE and Equipment*, <https://www.cdc.gov/coronavirus/2019-ncov/hcp/ppe-strategy/> (last visited Apr. 9, 2020).

- Cloth face coverings should be worn by detainees and staff (when PPE supply is limited) to help slow the spread of COVID-19. Cloth face masks should:
  - fit snugly but comfortably against the side of the face
  - be secured with ties or ear loops where possible or securely tied
  - include multiple layers of fabric
  - allow for breathing without restriction
  - be able to be laundered and machine dried without damage or change to shape.

➤ **Hygiene**

- Reinforce healthy hygiene practices and provide and restock hygiene supplies throughout the facility, including in bathrooms, food preparation and dining areas, intake areas, visitor entries and exits, visitation rooms, common areas, medical, and staff-restricted areas (e.g., break rooms).
- Require all persons within the facility to cover their mouth and nose with their elbow (or ideally with a tissue) rather than with their hand when they cough or sneeze, and to throw all tissues in the trash immediately after use. Provide detainees and staff no-cost access to tissues and no-touch receptacles for disposal.
- Require all persons within the facility to maintain good hand hygiene by regularly washing their hands with soap and water for at least 20 seconds, especially after coughing, sneezing, or blowing their nose; after using the bathroom; before eating or preparing food; before taking medication; and after touching garbage.
- Provide detainees and staff no-cost, unlimited access to supplies for hand cleansing, including liquid soap, running water, hand drying machines or disposable paper towels, and no-touch trash receptacles.
- Provide alcohol-based hand sanitizer with at least 60% alcohol where permissible based on security restrictions.
- Require all persons within the facility to avoid touching their eyes, nose, or mouth without cleaning their hands first.
- Post signage throughout the facility reminding detained persons and staff to practice good hand hygiene and cough etiquette (printable materials for community-based settings can be found on the [CDC website](#)). Signage must be in English and Spanish, as well as any other common languages for the detainee population at the facility.
- Prohibit sharing of eating utensils, dishes, and cups.
- Prohibit non-essential personal contact such as handshakes, hugs, and high-fives.

➤ **Cleaning/Disinfecting Practices**

- Adhere to CDC recommendations for cleaning and disinfection during the COVID-19 response.<sup>7</sup>
- Several times a day using household cleaners and Environmental Protection Agency-registered disinfectants, clean and disinfect surfaces and objects that are frequently touched, especially in common areas (e.g., doorknobs, light switches, sink handles, countertops, toilets, toilet handles, recreation equipment). The Environmental Protection Agency's (EPA) list of certified cleaning products is located [here](#).
- Staff should clean shared equipment several times per day and on a conclusion of use basis (e.g., radios, service weapons, keys, handcuffs).
- Ensure that transport vehicles are thoroughly cleaned after carrying a confirmed or suspected COVID-19 case.
- Facility leadership will ensure that there is adequate oversight and supervision of all individuals responsible for cleaning and disinfecting these areas.

### **CDC Recommended Cleaning Tips**

#### **Hard (Non-porous) Surfaces**

- If surfaces are dirty, they should be cleaned using a detergent or soap and water prior to disinfection.
- For disinfection, most common EPA-registered household disinfectants should be effective.
  - A list of products that are EPA-approved for use against the virus that causes COVID-19 is available [here](#). Follow the manufacturer's instructions for all cleaning and disinfection products for concentration, application method and contact time, etc.
  - Additionally, diluted household bleach solutions (at least 1000ppm sodium hypochlorite) can be used if appropriate for the surface. Follow manufacturer's instructions for application, ensuring a contact time of at least 1 minute, and allowing proper ventilation during and after application. Check to ensure the product is not past its expiration date. Never mix household bleach with ammonia or any other cleanser. Unexpired household bleach will be effective against coronaviruses when properly diluted.
    - Prepare a bleach solution by mixing:
      - 5 tablespoons (1/3 cup) bleach per gallon of water or
      - 4 teaspoons bleach per quart of water

#### **Soft (Porous) Surfaces**

---

<sup>7</sup> Attachment I, Centers for Disease Control and Prevention, *Cleaning and Disinfection for Community Facilities*, <https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/cleaning-disinfection.html> (last visited Apr. 9, 2020).

- For soft (porous) surfaces such as carpeted floor, rugs, and drapes, remove visible contamination if present and clean with appropriate cleaners indicated for use on these surfaces. After cleaning:
  - If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely.
  - Otherwise, use products that are EPA-approved for use against the virus that causes COVID-19 and that are suitable for porous surfaces.<sup>8</sup>

## **Electronics**

- For electronics such as tablets, touch screens, keyboards, remote controls, and ATM machines, remove visible contamination if present.
  - Follow the manufacturer's instructions for all cleaning and disinfection products.
  - Consider use of wipeable covers for electronics.
  - If no manufacturer guidance is available, consider the use of alcohol-based wipes or sprays containing at least 70% alcohol to disinfect touch screens. Dry surfaces thoroughly to avoid pooling of liquids.

## **Linens, Clothing, and Other Items That Go in the Laundry**

- In order to minimize the possibility of dispersing virus through the air, do not shake dirty laundry.
- Wash items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely. Dirty laundry that has been in contact with an ill person can be washed with other people's items.
- Clean and disinfect hampers or other carts for transporting laundry according to guidance above for hard or soft surfaces.

## **PREVENTION**

Detention facilities can prevent introduction of COVID-19 from the community and reduce transmission if it is already inside by reinforcing good hygiene practices among incarcerated/detained persons, staff, and visitors (including increasing access to soap and paper towels), intensifying cleaning/disinfection practices, and implementing social distancing strategies.

Because many individuals infected with COVID-19 do not display symptoms, the virus could be present in facilities before cases are identified. Both good hygiene practices and social distancing are critical in preventing further transmission.

---

<sup>8</sup> Attachment J, U.S. Environmental Protection Agency, *List N: Disinfectants for Use Against SARS-CoV-2*, <https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2> (last visited Apr. 9, 2020).

➤ **Perform pre-intake screening for all staff and new entrants for symptoms of COVID-19.**

Screening should take place before staff and new intakes enter the facility or just inside the facility, where practicable. For new admissions, this should occur before beginning the intake process, in order to identify and immediately isolate any detainee with symptoms before the individual comes into contact with others or is placed in the general population. This should include temperature screening of all staff and new entrants, as well as a verbal symptoms check.

- Verbal screening for symptoms of COVID-19 and contact with COVID-19 cases should include the following questions based on [Interim Guidance: Managing COVID-19 in Correctional/Detention Facilities](#):
  - Today or in the past 24 hours, have you had any of the following symptoms?
    - Fever, felt feverish, or had chills?
    - Cough?
    - Difficulty breathing?
  - In the past 14 days, have you had contact with a person known to be infected with COVID-19 where you were not wearing the recommended proper PPE?
- If staff have symptoms of COVID-19 (fever, cough, shortness of breath): they must be denied access to the facility.
- If any new intake has symptoms of COVID-19:
  - Require the individual to wear a face mask.
  - Ensure that staff interacting with the symptomatic individual wears recommended PPE.
  - Isolate the individual and refer to healthcare staff for further evaluation.
  - Facilities without onsite healthcare staff should contact their state, local, tribal, and/or territorial health department to coordinate effective isolation and necessary medical care.
- If an individual is a close contact of a known COVID-19 case or has traveled to an affected area (but has no COVID-19 symptoms), quarantine the individual and monitor for symptoms two times per day for 14 days.

➤ **Visitation**

- During suspended (social) or modified (legal) visitation programs, provide access to virtual visitation options where available. When not possible, verbally screen all visitors on entry for symptoms of COVID-19 and perform temperature checks, when possible. ICE continues to explore opportunities to enhance attorney access while legal visits are being impacted. For facilities at which immigration hearings are conducted or where detainees are otherwise held who have cases pending immigration proceedings, this may include:

- Adding all immigration attorneys of record to the Talton Pro-bono platform.
  - Requiring facilities to establish a process for detainees/immigration attorneys to schedule appointments and facilitate the calls.
  - Leveraging technology (e.g., tablets, smartphones) to facilitate attorney/client communication.
  - Working with the various detention contractors and telephone service providers to ensure that all detainees receive some number of free calls per week.
  - Communicate with the public about any changes to facility operations, including visitation programs. Facilities are encouraged to prohibit or, at a minimum, significantly adopt restricted visitation programs, and to suspend all volunteer work assignments for detainees assigned to food service, and other assignments where applicable.
- **Where possible, restrict transfers of detained non-ICE populations to and from other jurisdictions and facilities unless necessary for medical evaluation, isolation/quarantine, clinical care, or extenuating security concerns.**
- **Consider suspending work release programs for inmates at shared facilities to reduce overall risk of introduction and transmission of COVID-19 into the facility.**
- **When feasible and consistent with security priorities, encourage staff to maintain a distance greater than six feet from an individual that appears feverish or ill and/or with respiratory symptoms while interviewing, escorting, or interacting in other ways, unless wearing PPE.**
- **Additional Measures to Facilitate Social Distancing**
- Although strict social distancing may not be possible in congregate settings such as detention facilities, all facilities housing ICE detainees should implement the following measures to the extent practicable:
    - Efforts should be made to reduce the population to approximately 75% of capacity.
    - Where detainee populations are such that such cells are available, to the extent possible, house detainees in individual rooms.
    - Recommend that detainees sharing sleeping quarters sleep “head-to-foot.”
    - Extend recreation, law library, and meal hours and stagger detainee access to the same in order to limit the number of interactions between detainees from other housing units.
    - Staff and detainees should be directed to avoid congregating in groups of 10 or more, employing social distancing strategies at all times.

- Whenever possible, all staff and detainees should maintain a distance of six feet from one another.
- If practicable, beds in housing units should be rearranged to allow for sufficient separation during sleeping hours.

## **MANAGEMENT**

If there has been a suspected COVID-19 case inside the facility (among incarcerated/detained persons, staff, or visitors who have recently been inside), begin implementing Management strategies while test results are pending. Essential Management strategies include placing cases and individuals with symptoms under medical isolation, quarantining their close contacts, and facilitating necessary medical care, while observing relevant infection control and environmental disinfection protocols and wearing recommended PPE.

### *ICE Custody Review for Potentially High-Risk Detainees*

Upon being informed of a detainee who may potentially be at higher risk for serious illness from exposure to COVID-19, ERO will review the case to determine whether continued detention is appropriate.<sup>9</sup> ICE will make such custody determinations on a case-by-case basis, pursuant to the applicable legal standards, with due consideration of the public health considerations implicated.

- **Considerable effort should be made to quarantine all new entrants for 14 days before they enter the general population.**
  - To do this, facilities should consider cohorting daily intakes; two days of new intakes, or multiple days on new intakes, in designated areas prior to placement into the general population. Given the significant variance in facility attributes and characteristics, cohorting options and capabilities will differ across the various detention facilities housing ICE detainees. ICE encourages all facilities to adopt the most effective cohorting methods practicable based on the individual facility characteristics taking into account the number new intakes anticipated per day.
  
- **For suspected or confirmed COVID-19 cases:**
  - Isolate the individual immediately in a separate environment from other individuals. Facilities should make every possible effort to isolate persons individually. Each isolated individual should be assigned his or her own housing space and bathroom where possible. Cohorting should only be practiced if there are no other available options. Only individuals who are laboratory-confirmed COVID-19 cases should be isolated as a cohort. Do not cohort confirmed cases with suspected cases or case contacts.
  - Ensure that the individual is always wearing a face mask (if it does not restrict breathing) when outside of the isolation space, and whenever another individual

---

<sup>9</sup> Attachment K, Assistant Director Peter Berg, Enforcement and Removal Operations, *Updated Guidance: COVID-19 Detained Docket Review* (Apr. 4, 2020).

enters the isolation room. Masks should be changed at least daily, and when visibly soiled or wet.

- If the number of confirmed cases exceeds the number of individual isolation spaces available in the facility, then ICE must be promptly notified so that transfer to other facilities, transfers to hospitals, or release can be coordinated immediately. Until such time as transfer or release is arranged, the facility must be especially mindful of cases that are at higher risk of severe illness from COVID-19. Ideally, ill detainees should not be cohorted with other infected individuals. If cohorting of ill detainees is unavoidable, make all possible accommodations until transfer occurs to prevent transmission of other infectious diseases to the higher-risk individual (For example, allocate more space for a higher-risk individual within a shared isolation room).
- Review the CDC's preferred method of medically isolating COVID-19 cases here depending on the space available in a particular facility. In order of preference, individuals under medical isolation should be housed:
  - Separately, in single cells with solid walls (i.e., not bars) and solid doors that close fully.
  - Separately, in single cells with solid walls but without solid doors.
  - As a cohort, in a large, well-ventilated cell with solid walls and a solid door that closes fully. Employ social distancing strategies related to housing in the Prevention section above.
  - As a cohort, in a large, well-ventilated cell with solid walls but without a solid door. Employ social distancing strategies related to housing in the Prevention section above.
  - As a cohort, in single cells without solid walls or solid doors (i.e., cells enclosed entirely with bars), preferably with an empty cell between occupied cells. (Although individuals are in single cells in this scenario, the airflow between cells essentially makes it a cohort arrangement in the context of COVID-19.)
  - As a cohort, in multi-person cells without solid walls or solid doors (i.e., cells enclosed entirely with bars), preferably with an empty cell between occupied cells. Employ social distancing strategies related to housing in the Prevention section above.
- Maintain isolation until all the CDC criteria have been met:
  - The individual has been free from fever for 72 hours without the use of fever-reducing medications.
  - The individual's other symptoms have improved (e.g., cough, shortness of breath).
  - The individual has tested negative in at least two consecutive respiratory specimens collected at least 24 hours apart.

- At least 7 days have passed since the date of the individual's first positive COVID-19 test and he or she has had no subsequent illness.
- Meals should be provided to COVID-19 cases in their isolation rooms. Isolated cases should throw disposable food service items in the trash in their isolation room. Non-disposable food service items should be handled with gloves and washed with hot water or in a dishwasher. Individuals handling used food service items must clean their hands after removing gloves.
- Laundry from a COVID-19 case can be washed with other individuals' laundry.
  - Individuals handling laundry from COVID-19 cases should wear disposable gloves, discard gloves after each use, and clean their hands after handling.
  - Do not shake dirty laundry. This will minimize the possibility of dispersing the virus through the air.
  - Launder items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely.
  - Clean and disinfect clothes hampers according to guidance above for surfaces. If permissible, consider using a bag liner that is either disposable or can be laundered.

**UNITED STATES DISTRICT COURT  
SOUTHERN DISTRICT OF TEXAS  
LAREDO DIVISION**

Raul Garza Marroquin, <i>et al.</i> ,	§	
	§	
Petitioners/Plaintiffs,	§	
	§	
v.	§	Civil Action No. 5:20-cv-54
	§	
Jose Longoria, Jr., <i>et al.</i> ,	§	
	§	
Respondents/Defendants.	§	

**ORDER**

Before the Court is Defendants' motion to dismiss the claims brought by Raul Garza Marroquin. Having reviewed the motion and the record before the Court, the Court finds that the motion has merit and grants the motion.

IT IS ORDERED that Garza's claims are DISMISSED WITH PREJUDICE.

Signed this \_\_\_\_\_ day of \_\_\_\_\_ 2020.
